

CROSSBREED HYBRIDS...

Here is a co-operation with my friend (not a surrealist) Peter van der Heijden in Amsterdam. In 2006 we made these digital prints, starting with this proof:

Peters micro-scans of crystals with my ink-drawing.

Next we brought together: Peter's scans of several microscopic worlds, such as crystals, living bacteria and larva. Rik made drawings and added objects: pieces of coral, cactus-needles. We both feed these into our computers to change, add color, structures etcetera.

The result was surprising and we made this portfolio (Tibetan Loktha paper) with 4 digital prints, named: CROSSBREED HYBRIDS
